

ATEX BATTERY MAINTENANCE

As per international regulations, ATEX batteries are shipped with 25-30% charging level.

All Motorola Solutions DMR and TETRA ATEX batteries contain a chip monitoring the battery. The chip is active even if the battery is disconnected and will discharge the battery even if it is in stock.

The battery must be re-charged within 6 months to avoid flat batteries. A battery that is fully discharged might not be possible to recover. A fully discharged battery is not a warranty case.
